# Describing a Manuscript According to the TEI Guidelines

## HANDS ON

Leipzig, Universitätsbibliothek Leipzig, Cod. Haen. 3518, Iir. Photo: Leipzig University Library.

## <msDesc>

<**msIdentifier**> contains the information required to identify the manuscript, such as holding institution and shelfmark.

<**msContents**> describes the intellectual content of a manuscript either as a series of paragraphs or as an itemised list, with name of author and title, transcriptions of rubrics, incipits, explicits etc., language(s), as well as primary bibliographic references.

<**physDesc**> groups information concerning all physical aspects of the manuscript, its material, size, format, collation (quire structure), script, decoration, binding, marginalia etc.

<**history**> provides information on the history of the manuscript, its origin, provenance and acquisition by its current holding institution.

<**additional**> groups other information about the manuscript, in particular administrative information relating to its availability, custodial history, surrogates etc.

# **<msDesc>: Exercise**

## I. DESCRIBE

THE CONTENTS OF THE  
MANUSCRIPT ACCORDING TO  
THE TEI GUIDELINES

**<msIdentifier>**

**<msContents>**

2. DESCRIBE THE PHYSICAL  
CHARACTERISTICS AND THE  
HISTORY OF THE MANUSCRIPT  
ACCORDING TO  
THE TEI GUIDELINES

**<physDesc>**

**<history>**

**<additional>**

# <msDesc>: Getting Started

## Manuscripts in the Digital Age: XML-Based Catalogues and Editions Day 3 - Part 1: Hands-On Manuscript Description

Using the “Manuscript\_Description\_Template.xml” file, start describing Leipzig, Universitätsbibliothek Leipzig, Cod. Haen. 3518 with the elements and attributes you learned yesterday.

Focus on the <msIdentifier> and <msContents> components of the <msDescription>.

### Elements

<altIdentifier>	<incipit>	<note>
<author>	<institution>	<p>
<bibl>	<lb>	<quote>
<collection>	<listBibl>	<region>
<colophon>	<locus>	<repository>
<country>	<msContents>	<rubicid>
<decoNote>	<msDesc>	<settlement>
<ex>	<msFrag>	<summary>
<explicit>	<msIdentifier>	<textLang>
<filiation>	<msItem>	<title>
<finalRubric>	<msName>	
<idno>	<msPart>	

### Attributes

@class	@otherLangs
@defective	@type
@from @to	@xml:id
@mainLang	@xml:lang
@n	

### Links

# <msDesc>: Getting Started

The screenshot shows a code editor window with two tabs at the top: "...France\_Latin\_5691\_Description\_NKY.xml" and "...\_Cod\_Haen\_3518 Description\_NKY.xml". The second tab is active. Below the tabs is a toolbar with icons for TEI, teiHeader, fileDesc, sourceDesc, msDesc, msContents, msItem, and note. The main area contains XML code with line numbers on the left. The code defines a TEI document with a titlestmt, publicationstmt, availability, and sourceDesc sections. A tooltip "Right-click for options" is visible near the bottom right.

```

# TEI Manuscript Description Module

HOW TO DESCRIBE  
A MANUSCRIPT ACCORDING TO  
THE TEI GUIDELINES

Manuscripts from Copenhagen, Den Arnamagnæanske Samling. Photo: Suzanne Reitz.

## <msDesc>

<**msIdentifier**> contains the information required to identify the manuscript, such as holding institution and shelfmark.

<**msContents**> describes the intellectual content of a manuscript either as a series of paragraphs or as an itemised list, with name of author and title, transcriptions of rubrics, incipits, explicits etc., language(s), as well as primary bibliographic references.

<**physDesc**> groups information concerning all physical aspects of the manuscript, its material, size, format, collation (quire structure), script, decoration, binding, marginalia etc.

<**history**> provides information on the history of the manuscript, its origin, provenance and acquisition by its current holding institution.

<**additional**> groups other information about the manuscript, in particular administrative information relating to its availability, custodial history, surrogates etc.

## <msDesc>

<**msIdentifier**> contains the information required to identify the manuscript, such as holding institution and shelfmark.

<**msContents**> describes the intellectual content of a manuscript either as a series of paragraphs or as an itemised list, with name of author and title, transcriptions of rubrics, incipits, explicits etc., language(s), as well as primary bibliographic references.

<**physDesc**> groups information concerning all physical aspects of the manuscript, its material, size, format, collation (quire structure), script, decoration, binding, marginalia etc.

<**history**> provides information on the history of the manuscript, its origin, provenance and acquisition by its current holding institution.

<**additional**> groups other information about the manuscript, in particular administrative information relating to its availability, custodial history, surrogates etc.

2. Download and open the file from the Google Drive folder

### **Week 1 > Day 3 > Exercises:**

- manuscript description xml file:

France\_Paris\_BnFrance\_Latin\_5691\_Description\_NKY.xml

## <msDesc>

<**msIdentifier**> contains the information required to identify the manuscript, such as holding institution and shelfmark.

<**msContents**> describes the intellectual content of a manuscript either as a series of paragraphs or as an itemised list, with name of author and title, transcriptions of rubrics, incipits, explicits etc., language(s), as well as primary bibliographic references.

## <msDesc>

<**physDesc**> groups information concerning all physical aspects of the manuscript, its material, size, format, collation (quire structure), script, decoration, binding, marginalia etc.

<**history**> provides information on the history of the manuscript, its origin, provenance and acquisition by its current holding institution.

<**additional**> groups other information about the manuscript, in particular administrative information relating to its availability, custodial history, surrogates etc.

## <physDesc>

- aspects of the form, support, extent, and quire structure of the manuscript object and of the way in which the text is laid out on the page: **Object Description**
- the styles of writing, decorative features, any musical notation employed and any annotations or marginalia: **Writing, Decoration, and Other Notations**
- discussion of its binding, seals, and any accompanying material: **Bindings, Seals, and Additional Material**

## <physDesc>

<**objectDesc**> contains a description of the physical components making up the object which is being described.

## <physDesc>

<**objectDesc**> contains a description of the physical components making up the object which is being described.

<**handDesc**> contains a description of all the different hands used in a manuscript or other object.

<**scriptDesc**> contains a description of the scripts used in a manuscript.

<**decoDesc**> contains a description of the decoration of a manuscript.

<**additions**> contains a description of any significant additions found within a manuscript or other object, such as marginalia or other annotations.

## <physDesc>

<**objectDesc**> contains a description of the physical components making up the object which is being described.

<**handDesc**> contains a description of all the different hands used in a manuscript or other object.

<**scriptDesc**> contains a description of the scripts used in a manuscript.

<**decoDesc**> contains a description of the decoration of a manuscript.

<**additions**> contains a description of any significant additions found within a manuscript or other object, such as marginalia or other annotations.

<**bindingDesc**> describes the present and former bindings of a manuscript.

<**sealDesc**> describes the seals or similar items related to the object described.

<**accMat**> (accompanying material) contains details of any significant additional material which may be closely associated with the manuscript.

## <objectDesc>

**@form** a short project-specific name identifying the physical form of the carrier, for example as a codex, roll, fragment, partial leaf, cutting etc.

The following elements are used within <objectDesc>:

<supportDesc> groups elements describing the physical support for the written part of a manuscript or other object.

**@material** a short project-defined name for the material composing the majority of the support.

<layoutDesc> collects the set of layout descriptions applicable to a manuscript or other object.

## <supportDesc>

The following elements are used within <**supportDesc**>:

<**support**> contains a description of the materials etc. which make up the physical support for the written part of a manuscript.

<**extent**> describes the approximate size of a text stored on some carrier medium or of some other object, digital or non-digital, specified in any convenient units.

<**foliation**> describes the numbering system or systems used to count the leaves or pages in a codex or similar object.

<**collation**> contains a description of how the leaves, bifolia, or similar objects are physically arranged.

<**condition**> contains a description of the physical condition of the manuscript or object.

## <supportDesc>: Exercise

Look at the description of Latin 569I:

1. What is the extent of the manuscript (i.e. how many leaves are there in the manuscript)? How is this indicated?
2. What are the dimensions of the manuscript?

## <layoutDesc>

The following element is used within <layoutDesc>:

<layout> describes how text is laid out on the page or surface of the object, including information about any ruling, pricking, or other evidence of page-preparation techniques.

@columns specifies the number of columns per page.

@ruledLines specifies the number of ruled lines per column.

@writtenLines specifies the number of written lines per column.

## <layoutDesc>: Exercise

Look at the description of Latin 569I:

1. How many columns are there in the manuscript?
2. How many written lines are there in the manuscript?
3. How many ruled lines are there in the manuscript?

# <supportDesc>: Exercise

# <supportDesc>: Exercise

# <supportDesc>: Exercise

## <physDesc>: Further Elements

<**dimensions**> contains a dimensional specification.

<**catchwords**> describes the system used to ensure correct ordering of the quires or similar making up a codex, typically by means of annotations at the foot of the page.

<**signatures**> contains discussion of the leaf or quire signatures found within a codex or similar object.

<**secFol**> (second folio) marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for it.

<**watermark**> contains a word or phrase describing a watermark or similar device.

<**stamp**> contains a word or phrase describing a stamp or similar device.

## <handDesc> <scriptDesc> <decoDesc>

The following element is used within <**handDesc**>:

<**handNote**> describes a particular style or hand distinguished within a manuscript.

The following element is used within <**scriptDesc**>:

<**scriptNote**> describes a particular script distinguished within the description of a manuscript or similar resource.

The following element is used within <**decoDesc**>:

<**decoNote**> contains a note describing either a decorative component of a manuscript or other object, or a fairly homogenous class of such components.

## <handDesc> <scriptDesc> <decoDesc>: Exercise

Look at the description of Latin 569I:

1. What do we know about the the styles of writing and decorative features of this manuscript?
2. Who wrote this manuscript?
3. Are there any marginalia in the manuscript?

# <physDesc>

## <msDesc>

<**msIdentifier**> contains the information required to identify the manuscript, such as holding institution and shelfmark.

<**msContents**> describes the intellectual content of a manuscript either as a series of paragraphs or as an itemised list, with name of author and title, transcriptions of rubrics, incipits, explicits etc., language(s), as well as primary bibliographic references.

<**physDesc**> groups information concerning all physical aspects of the manuscript, its material, size, format, collation (quire structure), script, decoration, binding, marginalia etc.

<**history**> provides information on the history of the manuscript, its origin, provenance and acquisition by its current holding institution.

<**additional**> groups other information about the manuscript, in particular administrative information relating to its availability, custodial history, surrogates etc.

## <msDesc>

<**msIdentifier**> contains the information required to identify the manuscript, such as holding institution and shelfmark.

<**msContents**> describes the intellectual content of a manuscript either as a series of paragraphs or as an itemised list, with name of author and title, transcriptions of rubrics, incipits, explicits etc., language(s), as well as primary bibliographic references.

<**physDesc**> groups information concerning all physical aspects of the manuscript, its material, size, format, collation (quire structure), script, decoration, binding, marginalia etc.

<**history**> provides information on the history of the manuscript, its origin, provenance and acquisition by its current holding institution.

<**additional**> groups other information about the manuscript, in particular administrative information relating to its availability, custodial history, surrogates etc.

## <msDesc>

<**msIdentifier**> contains the information required to identify the manuscript, such as holding institution and shelfmark.

<**msContents**> describes the intellectual content of a manuscript either as a series of paragraphs or as an itemised list, with name of author and title, transcriptions of rubrics, incipits, explicits etc., language(s), as well as primary bibliographic references.

<**physDesc**> groups information concerning all physical aspects of the manuscript, its material, size, format, collation (quire structure), script, decoration, binding, marginalia etc.

<**history**> provides information on the history of the manuscript, its origin, provenance and acquisition by its current holding institution.

<**additional**> groups other information about the manuscript, in particular administrative information relating to its availability, custodial history, surrogates etc.

## <history>

The following elements are used within <history>:

<origin> contains any descriptive or other information concerning the origin of a manuscript.

<provenance> contains any descriptive or other information concerning a single identifiable episode during the history of a manuscript after its creation but before its acquisition.

<acquisition> contains any descriptive or other information concerning the process by which a manuscript entered the holding institution.

# <origin>

The following elements are most commonly used within <origin>:

<origDate> contains any form of date, used to identify the date of origin for a manuscript or a manuscript part.

<origPlace> contains any form of place name, used to identify the place of origin for a manuscript or a manuscript part.

<bibl> contains a loosely-structured bibliographic citation of which the sub-components may or may not be explicitly tagged.

## **@notBefore** and **@notAfter**

**@notBefore** specifies the earliest possible date for the event in standard form, e.g. yyyy-mm-dd.

**@notAfter** specifies the latest possible date for the event in standard form, e.g. yyyy-mm-dd.

```
<origDate notBefore="1125"notAfter="1175">  
the mid-twelfth century</origDate>
```

# **@calendar** and **@period**

**@calendar** indicates the system or calendar to which the date represented by the content of this element belongs.

**@period** supplies a pointer to some location defining a named period of time within which the datable item is understood to have occurred.

```
<origDate notBefore="1125" notAfter="1175"  
calendar="#Gregorian">the mid-twelfth century  
</origDate>
```

## <history>: Exercise

Look at the description of Latin 569I:

1. Who is Angelo de Sanguineis de Roma?
2. What is the mistake that I've made?

## <additional>

The following elements are used within <additional>:

<**adminInfo**> contains information about the present custody and availability of the manuscript or other object, and also about the record description itself.

<**surrogates**> contains information about any representations of the manuscript or other object being described which may exist in the holding institution or elsewhere.

<**bibl**> contains a loosely-structured bibliographic citation of which the sub-components may or may not be explicitly tagged.

<**listBibl**> contains a list of bibliographic citations of any kind.

## <adminInfo>

<**recordHist**> provides information about the source and revision status of the parent manuscript or object description itself.

<**source**> describes the original source for the information contained with a manuscript or object description.

<**change**> documents a change or set of changes made during the production of a source document, or during the revision of an electronic file.

<**availability**> supplies information about the availability of the manuscript, for example any restrictions on its use.

<**custodialHist**> contains a description of a manuscript or other object's custodial history, either as running prose or as a series of dated custodial events.

<**custEvent**> describes a single event during the custodial history of a manuscript or other object.
